Vital Data Technology Announces Strategic Alliance with Business Contingency Group

Business Contingency Group to Distribute WebEOC-ST with Interface to Vital Data's EMS Information System Allowing Real-Time EMS Decision Support for Emergency Operations Centers

IRVINE, Calif.--(BUSINESS WIRE)--Vital Data Technology is proud to announce that Business Contingency Group (BCG), a leading provider and systems integrator of WebEOC solutions worldwide, has become a strategic member of its Vital Data Technology (VDT) Alliances Program offering a seamless integrated interface to its WebEOC-Surface Transportation (ST) solution, allowing real-time information sharing between Emergency Medical Services (EMS) information systems and WebEOC-ST crisis information systems.

As a member of the VDT Alliances Program, BCG will include an interface to VDT's EMS information system in its latest release of WebEOC-ST under a joint co-marketing program developed to meet the current need for supplying real-time EMS data to Emergency Management Agency's (EMA). VDT has recognized the opportunity to provide its real-time EMS data for improved situational response and mass casualty incident management to Emergency Operations Centers (EOC). VDT is committed to improving EMS workflow throughout the emergency care continuum and recognizes BCG as a leading-edge provider of solutions for emergency response/management particularly involving surface transportation.

"WebEOC-ST represents the leading solution for emergency response, management and collaboration within the EOC. We feel that BCG's "Surface Transportation" technology presents a tremendous opportunity for our customers to provide EMS data to the EOC for better and quicker emergency response decisions," said Mr. Frank Zanka, Vice President of Vital Data Technology Corporation. "Web-EOC-ST's ability to bring real-time data from an electronic Patient Care Record (PCR) as part of the emergency response and management system enables a new level of decision support collaboration that is unique in finally bringing EMS and EMA together."

"The need for better situational awareness is driving agencies to connect their teams and have tighter relations with all relevant agencies. Transportation issues are increasingly more important whether being a target for a terrorist attack, supporting evacuations, or transporting patients," said Lee Goldstein, President/CEO and founder of BCG. "VDT's reputation and experience together with BCG's surface transportation WebEOC-ST environment will enable emergency response agencies to have real-time EMS transportation element information within the Emergency Operations Center."

About Vital Data Technology (VDT)

Vital Data Technology is a leading innovator of real-time solutions designed to capture data, pre-emptively share vital patient medical information, gain knowledge, and save lives through the hands of our nation's first responders. The Vital Data Technology integrated suite of applications creates, manages and integrates EMS information with emergency operations centers, and provides real-time reporting and analytics.

WebPCR™, WebCP™, WebPHI™, ICEMR™ can be obtained through VDT directly. For more information about company or sales, refer to www.vitaldatatech.com.
